Introduction

Megamind Consulting is an upcoming IT solutions provider with a dedicated and talented resource base and an experience in developing and implementing high quality systems for manufacturing plants, corporate offices, sales offices and sales outlets. It specializes in providing end-to-end solutions for its clients that tackle aspects of an enterprise over a complete software development life-cycle including Analysis, Data Management, Enterprise Resource Planning, collaboration over the Web and Customer Relationship Management

As the world prepares itself for the next technological wave that will radically change the way business is done, Megamind Consulting sees itself creating strategic advantage for its customers through its role as a catalyst between its customers and its technology suppliers.

To do this the company realizes that innovating, inventing and adapting for the future is essential, which is why we have set up strategic alliances with some of the leading technology providers.

This document highlights the need for outsourcing and the options for companies exploring outsourcing.

Today's innovation rates are skyrocketing. No enterprise, acting alone, can out-innovate all its competitors. Companies are finding benefit in outsourcing engineering and business processes to specialists who can provide these services faster and at lower cost. Strategic outsourcing enables companies to focus on their own core competencies and businesses by leveraging on the core competences of its outsourcing partner.

By outsourcing these types of applications, companies can focus more on their businesses and less on the technologies required to run them. Outsourcing enables companies to implement big, expensive, hard-to-manage systems such as ERP and get them running quicker and at a lower cost.

As far as costs go, outsourcing a solution such as ERP makes a lot of sense. By outsourcing, your company doesn't have to hire and keep on staff, technical folks to maintain an in-house solution. With today's hectic tech job market, just finding qualified people can be a daunting task.

Global ERP vendors are moving in the direction of offering their application in a hosted model, whether directly from the vendors or through third parties.

With Application Maintenance Outsourcing, companies can quickly take advantage of emerging technologies without having to wait for arranging the huge investments and skills required to obtain the same.

The following is a list of success criteria for outsourcing. The more the outsourcing partner meets these criteria, the better will be your outsourcing.

1. An excellent infrastructure
2. Hiring and retention of qualified engineers
3. Engineers dedicated to your company processes and projects
4. A knowledge of your company's quality processes
5. Degree of control you can exercise over the outsourced work
6. Team focus on your work
7. Security
8. Capacity to handle varying workloads

While selecting a service provider, one must make sure that the offering includes everything from a scalable infrastructure, round-the-clock support and monitoring, and a wide range of applications.

By choosing Megamind Consulting as your outsourcing partner all these criteria will not only met but your expectations will be far exceeded.

Outsourcing application development and maintenance provides your organization with both short term and long term benefits:

Free your resources for strategic activities - Increased availability of key IT staff, Less IT staff management

Compressed project timelines

Freedom to focus on core business - The ability to leverage the power of your enterprise applications and let the experts provide on-going maintenance, allowing you to focus on your core business goals

Lower maintenance and development costs - Reduces costs associated with application management and efficient operation of the system contributing to an improved bottom line.

Continuous Support - 24x7 Virtual development environment

Best Practices - Access to industry proven methodologies, tools and techniques
